STATEMENT

At RJS BUSINESS COLLEGE, Our Mission Is To Provide High-Quality Education, Training, And Research Opportunities To Prepare Student For Successful Careers In Business And Management.

BCA :

- 1)Empowering tech-savvy professionals for a digital world.
- 2)Transforming students into innovative IT leaders.
- 3)Bridging technology and talent for a brighter tomorrow.

BBM :

- 1)Empowering leaders, transforming businesses
- 2)Nurturing visionary entrepreneurs and managers.
- 3)Developing global business leaders, one student at a time.

LIMITATION OF THE EXISTING SYSTEM

According to existing system there is some limitation in manual work :-

- In existing system the organization faces many problem such as updation and deletion of records.
- In existing system once data is loss we cannot retrieve data . But in software we have backup and recovery option that helps us to retrieve data.
- When we search random student data it takes many time and go through one by one first but in software we directly search student data by entering their respective roll number and registration number.
- Existing System faces hard copy problems and maintain registers for student details. But in software we go through with soft copy, there is no need to maintain registers.
- In existing system security of data is big issue but in software system we secure our data by giving LOGIN ID and PASSWORD.
- The editing of files is also a major problems inexisting system. But in software system editing process is done very easily.

- Document transportation is also a major problem in existing system but in software management system the transfer of files is not a big issue.
- Existing System faces high costs problems comparison of paper work management.
- There is limited communication and collaboration in existing system but in software based system there is unlimited communication and collaboration.
- Environmental damage is a major issue in existing system.
- There is lack of storage spaces in existing system as compared to software based management.
- Manual documents can be easily damaged, misplaced or stolen but in software based management the data is secure as compared to existing system

Objective Of The Project

The first objective of this project is to reduce burden of paper work system management by the help of software based management.

Data Security and Access Control:

- The software will implement a **secure login mechanism** using **user IDs and passwords** to protect sensitive data from unauthorized access, addressing security issues prevalent in manual systems.
- Admins, faculty, and students will have role-based access to specific features of the system, ensuring **controlled data access** and enhancing overall security.

Backup and Recovery:

- Unlike the existing system, where data loss is a critical issue, the software will provide a **backup and recovery option** to securely store copies of data, ensuring that lost or corrupted data can be retrieved at any time.

Simplified Record Update and Deletion:

- Editing and updating student, faculty, and course records will be **easy and quick** with user-friendly interfaces, unlike the existing manual system, where updates and deletions often require substantial effort and may result in errors.
- The system will allow users to easily **modify** records, ensuring accurate and timely updates to any changes in student or faculty data.

Automated Reports and Data Analysis:

- The software will provide the ability to generate **automated reports** for academic records, attendance, fees, etc., eliminating the need for manual compilation of reports.
- This will save time for administrative staff and improve the accuracy and reliability of reports.

MODULE DESCRIPTION

1. COURSE MANAGEMENT MODULE

1.1 COURSE Management

1.2 PROFESSOR Management

1.3 SCHEDULE Management

1.4 FEE Structure

2. DEPARTMENT MANAGEMENT MODULE

2.1 DEPARTEMENT Management

2.2 BUILDING Management

3. ADMISSION MODULE

3.1 ENQUIRY Management

3.2 ADMISSION Management

4. STUDENT MANAGEMENT MODULE

4.1 Student Management

4.2 ATTENDANCE Management

5. EXAM MANAGEMENT MODULE

5.1 EXAM Management

5.2 EXAM SCHEDULE Management

5.3 EXAM RESULT Management

6. REPORT MANAGEMENT MODULE

(6.1 ALL FILES)

1. COURSE MANAGEMENT MODULE

This module focuses on managing courses, professors, and schedules effectively.

Sub-Modules:

1.1 Course Management:

- Create, update, and delete course details like name, code, syllabus, and credits.
- Assign courses to specific departments and professors.

Input file name-

Output file name-course _details

1.2 Professor Management:

- Add and update details of professors, including personal information, qualifications, and assigned courses.
- Allocate professors to courses and subjects.

Input file name- course_details

Output file name- professor_detail

1.3 Schedule Management:

- Create and maintain class schedules, ensuring no conflicts in timings or room allocation.
- Notify students and faculty of schedule updates.

Input file name- professor_details

Output file name- schedule_details

2. Department Management Module

This module handles departmental and infrastructure management.

Sub-Modules:

2.1 Department Management:

- Manage department details, including name, code, and faculty head.
- Associate courses, professors, and students with specific departments

Input file name- course_details.

Output file name-department_details.

2.2 Building Management:

- Record and manage information about college buildings and facilities.
- Allocate rooms and infrastructure to departments and courses.

Input file name-Department_details.

Output file name- Building_details.

3. Admission Module

This module is designed to streamline the admission process for new students.

Sub-Modules:

3.1 Enquiry Management:

- Record inquiries from prospective students.
- Provide details on courses, fees, and admission criteria.
- Track follow-ups and maintain a database of inquiries.

Input file name- course_details

Output file name-Enquiry_details

3.2 Admission Management:

- Handle the application process, including form submission and document verification.
- Assign unique student IDs and allocate students to departments.
- Generate admission confirmation letters.

Input file name- Enquiry_details

Output file name-Admission_details

4. Student Management Module

This module automates the management of student data and related tasks.

Sub-Modules:

4.1 Student Management:

- Maintain comprehensive student records, including personal details, academic history, and department information.
- Update records for transfers, re-enrollment, or course changes.

Input file name- Admission_details

Output file name-Student_details

4.2 Fee Management:

- Manage fee collection, payment tracking, and receipts.
- Generate reminders for unpaid fees and provide fee status reports

Input file name-Course_details, student_details

Output file name-Fee_details

4.3 Attendance Management:

- Record daily attendance for students.
- Generate attendance reports and notify students of low attendance.

Input file name- Student_details, department_details

Output file name- Attendance_details

5. Exam Management Module

This module focuses on exam administration and result processing.

Sub-Modules:

5.1 Exam Management:

- Create and update exam details, including type (midterm, final) and syllabus coverage.
- Allocate students to exam rooms and assign invigilators.

Input file name- student_details, attendance, department

Output file name- Exam_details

5.2 Exam Schedule Management:

- Plan and publish exam timetables for all courses and departments.
- Notify students and faculty of schedule changes.

Input file name- Exam_details

Output file name-Exam_schedule

5.3 Exam Result Management:

- Enter and process student results for each subject.
- Generate report cards and notify students of their performance.

Input file name-Student_details , exam_schedule

Output file name- Exam_result

6. Report Management Module

This module is dedicated to generating and maintaining all types of reports required for administrative and academic purposes.

Sub-Modules: 6.1 All Files:

- Generate detailed reports for students, professors, courses, departments, exams, and fees.
- Provide downloadable formats (PDF, Excel) for official use.
- Maintain a centralized archive for easy retrieval of past records.
- Input file name-
- Output file name
